

Step 2: Extinguisher made safe (safety pin/ suspect tape) and packaged in accordance with ADR Regulations.

Step 1: Extinguisher inspected and condemned at customer site during scheduled service

Step 3: Extinguisher removed from customer site and transported to Chubb premises in accordance with ADR Regulations

Step 4: At Chubb Local Business Centre (LBC) extinguishers removed from packaging and placed into stillages.

Step 5: Collection once a week from all Chubb' LBCs to be transported to Chubb National Extinguisher Recycling Unit.

Step 6: Stillages arrive at the ERU

Step 7: Sorting stage: extinguishers are palletised according to their contents and body type

Step 8: Extinguishers are depressurised where necessary

Step 9: Headcaps removed: valves, syphon tubes and cartridges are separated. After a detailed inspection the parts are either recycled or scrapped.

Step 10: Content of extinguisher emptied if appropriate and Internal Inspection of body carried out

Step 11: After inspection the body goes either for recycling or is cut in half for scrapping

Please note that Chubb hold a Waste Carrier Licence

Extinguisher Recycling Procedure
