The Fry Fighter

*For use on cooking oil
and deep fat fires*

FRY FIGHTER

The Solution to Fires in Deep Fat Fryers

In a class of its own

Cooking oil fires, because of their high auto-ignition temperatures are difficult to extinguish. Conventional extinguishers are not effective for cooking oil fires, as they do not cool sufficiently or may even cause flash back, so putting the operator at risk.

The 6 litre Fry Fighter extinguisher has been developed to deal specifically with fires resulting from cooking oils and fats. It has the capability to fight fires in deep fat fryers of up to 75 litres capacity.

It contains a specially formulated wet chemical which, when applied to the burning liquid, cools and emulsifies the oil, extinguishing the flame, sealing the surface and preventing re-ignition.

Features

- Exclusively developed for deep fat fires.
- Knocks flames out in seconds.
- Changes burning cooking oil into soap form preventing re-ignition.
- Simple seize and squeeze operation.
- Successfully extinguished the largest benchmark test in the BSI standard (75F); 75 litres of burning sunflower oil at approx 360°C.
- Passed 35kv conductivity of discharge test.
- Made from corrosion resistant stainless steel.
- 5 year guarantee.
- Manufactured to BS 7937 : 2000

Fire ratings are a means of measuring the effectiveness of a fire extinguisher in terms of the maximum size of fire that can be extinguished.

This involves heating ordinary cooking oil to auto ignition temperature (360°C) in a container. After 2 minutes the heat is switched off and the fire is attacked. Once extinguished there must be no re-ignition for ten minutes.

Fry Fighter has been independently tested and has achieved a 75F rating.

An added benefit of the Fry Fighter is that it is also suitable for freely burning materials (Class A), such as wood, paper and fabrics and carries a 13A rating.

Fry Fighter is easy to use with a controllable discharge producing a fine spray through its lance to give a gentle, yet highly effective application.

It has also passed the 35 kv conductivity of discharge test providing additional safety if accidentally sprayed onto live electrical hazards.
